

Victor Hanszman Drumond Gonçalves

Senior Full Stack Software Engineer | Angular, React, Node.js | Design Systems, Scalable Micro Front-Ends, API Development, Clean Code

E-mail: victor.hanszman@hotmail.com

Location: Minas Gerais, Brazil

Github: <https://github.com/Hanszman>

Phone Number: +55 (31) 9 9453-3811

LinkedIn: <https://www.linkedin.com/in/victor-hanszman/>

Portfolio: <https://victor-hanszman-portfolio.vercel.app/>

Summary

Senior Full Stack Software Engineer with 7+ years of experience delivering scalable enterprise web applications using Angular, React, TypeScript, JavaScript and Node.js. Experienced in legacy-to-modern system migrations, building Design Systems and Micro Front-End architectures, developing reusable component libraries. Contributed to platforms used by hundreds of thousands of users, as well as smaller-scale applications. Strong background in Clean Code, SOLID principles and modern architectures, with additional experience in Next, Nest, PHP, .NET and SQL.

Experience

Pathbit – Senior Full Stack Software Engineer

Jul 2026 – Present

- Joined a critical project with three additional new engineers after the complete turnover of the previous development team, taking ownership of three Front-End applications and multiple Back-End microservices without any engineering handover process. Reverse-engineered the entire architecture, repositories, integrations and codebase while collaborating with the product team to reconstruct business rules, reducing onboarding time from an expected several months to a few weeks and restoring team's delivery capability.
- Designed and developed a scalable Design System library in parallel with a large-scale White Label initiative, creating more than 20 reusable, customizable and highly flexible UI components capable of dynamically supporting different customer branding, including colors, themes, logos and visual identity. As the team's primary Front-End engineer while actively contributing to Back-End maintenance across multiple microservices using technologies such as React, TypeScript, .NET, C# and REST APIs, I led the incremental adoption of the library across three legacy Front-End applications without disrupting production. Applied Clean Code, SOLID and component-driven architecture principles to standardize the UI, reduce duplicated code by approximately 60%–70%, improve maintainability, ensure seamless integration between Front-End and Back-End systems, enabling scalable long-term feature delivery.
- Reorganized the project's delivery workflow by consolidating divergent development branches from multiple repositories into a controlled integration branch using Azure DevOps. Resolved merge conflicts, stabilized releases through dedicated testing environments and restored a reliable deployment pipeline before production rollout, significantly reducing release risk and improving deployment confidence.

Siteware – Full Stack Software Engineer

Oct 2024 – Jul 2026

- Designed, developed and maintained a scalable Front-End Design System library with Angular, TypeScript, JavaScript, Tailwind and Storybook. Standardized UI/UX for multiple products, sharing reusable components across multiple teams, reducing development time effort, ensuring consistency and accelerating feature delivery cycles. This initiative improved initial CSS payload by 18% reduction, optimizing rendering performance and reducing layout processing costs. Also proposed the migration from a paid third-party UI library to a free alternative, generating annual licensing cost savings of US\$4,740.
- Led the incremental migration of legacy systems to modern Angular architecture using Micro Front-Ends, Module Federation and CDNs. Enabled gradual evolution without disrupting production and delivering high impact features. This reduced Front-End overhead per session by up to 47%–89% and improved perceived navigation performance by ~65%–80% across multi-page user flows.
- Maintained and developed enterprise-level features across multiple clients on a large system built with Angular, .NET, C#, REST APIs and SQL Server. Delivered scalable solutions used by big companies like Vale and Unimed with more than 330k active users, ensuring high availability and performance at scale.
- Applied Clean Code, SOLID, DRY, YAGNI, KISS and TDD principles in daily development, using Jasmine, Karma and Vitest for unit testing. Significantly improved code quality, maintainability and test coverage while reduced bugs and regression issues in a large-scale enterprise codebase.
- Implemented CI/CD pipelines and containerized applications using Docker and Azure DevOps. Improved deployment reliability for multiple enterprise clients and reduced delivery time across environments.

Stefanini – Full Stack Software Engineer

Sep 2021 – Oct 2024

- Developed and maintained enterprise web applications for global clients using Angular, TypeScript, JavaScript, Node.js and SQL Server. Delivered scalable solutions used in large-scale environments for international customers such as Ford and Ale, supporting multi-region usage across Asia and South America with improved system stability and performance.
- Designed and implemented complex workflows with geolocation and step-by-step scheduling features. Improved operational

efficiency by approximately ~25%–35%, reducing the overhead of manual processes in delivery flows and contributing to an improved user experience.

- Solved advanced Front-End challenges involving internationalization and dynamic input validation using RegEx-based solutions with Angular and TypeScript. Reduced user input errors by ~40%, improving form reliability and completion success rate across multi-region applications.
- Refactored highly coupled legacy components into scalable architectures and restructured page designs with Angular, SCSS and Bootstrap. Improved rendering performance, reducing screen load time by ~1–2 seconds and significantly increased maintainability for future feature development.
- Collaborated closely with Back-End teams to handle complex business logic and API integrations when architectural constraints required Front-End solutions. Enabled robust Full Stack solutions and reduced feature delivery cycles from days to hours in some scenarios.

M2M Telemetry – Full Stack Software Engineer

Apr 2020 – Sep 2021

- Built a complete telemetry and energy monitoring system from scratch, handling both Front-End and Back-End development, using Angular, TypeScript, Node.js and SQL Server. Delivered an end-to-end solution enabling continuous monitoring for enterprise clients in the energy industry, such as CEMIG.
- Developed Full Stack features including APIs with complex data processing logic and user interfaces with interactive dashboards for real-time analysis using Angular, TypeScript, JavaScript, Chart.js, Node.js, Express, Knex and SQL Server. Enabled faster operational decision-making, by reducing data analysis time from hours to minutes and ensured seamless integration between Front-End and Back-End systems.
- Maintained and improved legacy systems ensuring stability and performance using PHP, Laravel, jQuery and MySQL. Reduced recurring system issues by ~20%–30%, ensuring maintainability and continuity of existing business workflows.

4mti – Full Stack Software Engineer

Sep 2018 – Mar 2020

- Developed and maintained user interfaces in legacy enterprise systems, working with established codebases, using PHP, JavaScript, jQuery, AJAX and relational databases. Supported multiple business clients ensuring system stability and continuity with consistent performance.
- Took ownership of critical bug fixes involving complex financial calculations with PHP, MySQL and PostgreSQL. Resolved high-impact issues, reducing errors by ~35%–50%, improving system reliability and data accuracy.
- Collaborated directly with clients to gather requirements and deliver iterative improvements. Improved alignment between business needs and technical solutions, reducing rework.
- Contributed to Full Stack development, working on existing architectures handling technical debt and production issues. Gained hands-on early experience maintaining real-world systems under production constraints.

Education

Bachelor's Degree in Information Systems — PUC-MG (2015 - 2018)

Postgraduate Degree in Full Stack Web Development — PUC-MG (2019 - 2021)

Languages

English: Full professional proficiency

Portuguese: Native proficiency

Spanish: Limited working proficiency

Skills

Angular | Node | TypeScript | JavaScript | React | Design System | Micro Front-End | REST APIs | Next | Nest | Express | HTML | CSS | SCSS | Tailwind | Bootstrap | PHP | Laravel | C# | .NET | Clean Code | SOLID | TDD | Unit Tests | E2E Tests | Vitest | Jasmine | Karma | Jest | Git | Docker | CI/CD | Vercel | Azure DevOps | SQL | MySQL | SQL Server | PostgreSQL | Prisma | Drizzle
